ABSTRACT

Oral care composition comprising a polymer obtainable by copolymerising a mixture of comonomers, in which at least 40 mol% of the mixture of comonomers is constituted by a comonomer having the formula (I):

$$H_2C=C(R)-(X)_n-Y$$

in which R is hydrogen or a methyl group, X is a divalent organic linking group, n is an integer of 0 or 1, and Y is a carboxylate or phosphonate anion, or the corresponding salt or acid thereof;

and in which the balance of the mixture of comonomers is constituted by neutral and/or cationic comonomers;

said composition being in the form of any one of a toothpaste, gel, foam, chewing gum, deformable strip or mouthwash and being suitable for use in the oral cavity.
